Active Directory Server

January 2013 to February 2013

An AD domain controller authenticates and authorizes all users and computers in a Windows domain type network—assigning and enforcing security policies for all computers and installing or updating software. For example, when a user logs into a computer that is part of a Windows domain, Active Directory checks the submitted password and determines whether the user is a system administrator or normal user.

Education:-

NED University Karachi,

BE, Telecommunication, 2007 – 2011

Islamia Degree College,

Intermediate, Pre-engineering, 2004-2006
