Intermediate of Science: Computer Science (ICS) 2010 - 2012
Punjab Group of Colleges, Lahore, Punjab, Pakistan

High School Diploma: Science 2008 - 2010
Govt. High School, Lahore, Punjab, Pakistan

PROFESSIONAL EXPERIENCE

June 2018 - Present

ArhamSoft (Pvt) Ltd l Lahore, Pakistan

SENIOR SOFTWARE ENGINEER

- Evaluate project requirements & specifications and develop software applications that surpass client expectations.
- Developed web applications using MERN stack and Blockchain.
- Collaborated with cross-functional teams to identify and implement new features.
- Created and maintained databases
- Coordinate with project managers regarding development timelines and project scope.
- Discuss project progress with clients, collect feedback on different stages and directly address concerns.

July 2016 – June 2018

Granjur Technologies l Lahore, Pakistan

ASSOCIATE SOFTWARE ENGINEER

- Analyzed requirements, designed, developed, and implemented software applications for multiple websites.
- Collaborated on all stages of systems development life cycle, from requirements gathering to production releases.
- Write well-designed, testable, and efficient code by using best software development practices for various projects.
- Collaborated with team members to ensure the timely delivery of projects.
- Integrated APIs and third-party libraries.

PROFESSIONAL PROJECTS

Coltivi Restaurant System
- A website of interior designs & products, and a restaurant that will be an online reservation Centre for meals for their customers.
- As a member of the team, I contributed to the app's development and maintenance of new and existing features.
- **Stack:** Bootstrap, Javascript, PHP, Laravel, MySQL

Transfer Immunity
- Fast and secure service for sharing and transferring files.
- This high-fidelity, SaaS-based platform allows users to send large files to different destinations as attachments with emails.
- A flexible and highly scalable file storage and sharing tool that scans the data of the file for malware before they take space in your account.
- **Stack:** Bootstrap, Javascript, PHP, Laravel, MySQL, React.js, Rest APIs

QR Code Generator
- Professional platform for the management of QR codes.
- Create, track, and edit all your QR codes in one place.
- Collaborate with the team to design, develop, and test new features
- **Stack:** Bootstrap, Javascript, PHP, Laravel, MySQL, React.js, Rest APIs

Token Bridge Dapp
- A bridge that offers unlimited transfers across chains for tokens. Metamask, phantom, and solflare connection using web3.js.
- **Stack:** Bootstrap, Javascript, React.js, Node.js, MongoDB, Express.js, Rest APIs, Web3.js, Solidity, Blockchain, Dapp, Redux

Event App
- The project aims to develop a mobile app with features and services that help users create events, shop reservations, and send invitations.
- Developed the site as well as write all the APIs for IOS and Android mobile apps.
- **Stack:** Bootstrap, Javascript, PHP, Laravel, MySQL

Shopping App
- This app same as olx and gumtree. Contributed to ongoing development and improvement of the app with the latest technologies and best practices in the field.
- **Stack:** Bootstrap, Javascript, PHP, Laravel, MySQL

Flow Platform
- A web-based application for live streaming to multiple social media platforms.
- Collaborated with a cross-functional team to ensure the timely delivery of high-quality software in an Agile environment.
- **Stack:** Bootstrap, Javascript, PHP, Laravel, MySQL, React.js, Rest APIs

Cloud & Mailbox Migration
- Migrate Your Data With a Single Click
- Move immunity is a SaaS-based platform to transfer your data quickly and securely. Migrate malware-free mailbox, calendar, contacts, and cloud data from any source to any destination.
- **Stack:** Bootstrap, Javascript, PHP, Laravel, MySQL, React.js, Rest APIs

Twitter Shilling Dapp
- Decentralized application developed in MERN stack, web3.js, and Blockchain.
- Post Request Protocol. Make requests, perform actions, and start getting rewarded.
- **Stack:** Bootstrap, Javascript, React.js, Node.js, MongoDB, Express.js, Rest APIs, Web3.js, Solidity, Blockchain, Dapp, Redux

PROFESSIONAL PROJECTS

HNW Crypto Investment

- A full-service crypto company that provides fundraising, token launch and marketing services.
- Contributed to ongoing development and improvement of the app including refinery, migration, launchpad etc.
- Utilized React.js and web3 technologies to build the app's user interface and functionality.
- **Stack:** Bootstrap, Javascript, Vue.js, Web3.js, Solidity, Blockchain, Dapp, Redux

Visionary Apes

- A project and raffles management system.
- Design and implement scalable and responsive React components.
- Collaborate with the team to design, develop, and test new features.
- **Stack:** Bootstrap, Javascript, React.js, Node.js, MongoDB, Express.js, Rest APIs, Web3.js, Blockchain, Dapp, Redux

Trex Dapp

- A decentralized application combination of bridge, dex and wallet modules
- Design and implement scalable and responsive React components.
- Collaborate with the team to design, develop, maintain, and test new features.
- Developed the site as well as write all the APIs.
- **Stack:** Bootstrap, Javascript, React.js, Node.js, MongoDB, Express.js, Rest APIs, Web3.js, Blockchain, Solidity, Dapp

Seedify

- Seedify is the leading blockchain gaming launchpad
- The Easiest way of Investing in Blockchain Games, NFTs
- It is based on token purchasing, staking, farming etc.
- Contributed to ongoing development and improvement of the app.
- **Stack:** Bootstrap, Javascript, React.js, Node.js, MongoDB, Express.js, Rest APIs, Web3.js, Solidity, Blockchain, Dapp, Redux

Alista

- A web and mobile-based application for customers and providers.
- The project is developed using Node.js, Firebase, MongoDB and other technologies.
- As a member of the team, I contributed to the app's development and maintenance of new and existing features.
- **Stack:** Bootstrap, Javascript, React.js, Node.js, MongoDB, Express.js, Rest APIs, Firebase

Shitcoinx

- A decentralized application ShitcoinX Token Exchange, is a place to trade your worthless crypto tokens in exchange for discounts on valuable online and offline products and services.
- Write clean, modular, and maintainable code
- As a member of the team, I contributed to the app's development and maintenance of new and existing features.
- **Stack:** Bootstrap, Javascript, React.js, Node.js, MongoDB, Express.js, Rest APIs, Web3.js, Blockchain, Solidity, Dapp
