MOHANDAS COLLEGE OF ENGINEERING AND TECHNOLOGY

August 2012 - May 2016

B.Tech in Computer Science

Chinmaya Vidyalaya

June 2010 - May 2012

PROJECTS

Way (WAY Dec 2022 - Present)

- The app is only for US region
- It is a **CAR-SUPER** app where users can book parking slots for airport, city, and events. Users can also purchase monthly parking for the airport.
- The app also supports booking for car wash. There is also a subscription that can be bought for car wash.
- Users can also fill gas for a reduced rate using this app.
- Users can buy insurance for their Car and Home.
- The app also has paid subscriptions for enjoying benefits.
- The app also has a tracker which tracks the user's drives which then can be converted as classified or unclassified trip which can be used for tax reductions.
- The app comes in with various features like Repair and Maintenance, Pet insurance, Cashback offers, Auto finance, and for finding EV stations from where the users can recharge their cars with a reduced rate.

HP CHROME EXTENSION (INSPIRISYS SOLUTION June 2022 - Dec 2022)

- This is a chrome extension which can be used by a company for printing out data simultaneously on different printers which are connected under the same company account.
- The user can add printers from different location of his company into an account and he/she can select which printers should be needed and with a click of a button the prints can be taken from the printers
- Here we have worked on react-native. Most of the time here has been used in learning of the language and doing some small UI fixes.

DATAZOOM (XMINDS INFOTECH July 2020 - June 2022)

- The project is a data collection app, where the app will collect data through pipelines while playing a video. The project is a framework which will allow one to collect data from video.
- The user can collect information like when someone skips the video, stops playing, increased the volume, how the bit rates was, etc
- The project has a huge code base and we were doing some bug fixes.
- This is actually a SDK that can be used on other apps

PILLO (XMINDS INFOTECH July 2020 - June 2022)

- The project is a wellness and e-commerce app, where the app will remind the users to take medicine accordingly with notifications and will keep track of the available medicine and have a provision to buy exhausted medicines.
- In this app the user can give in reminders which will help users to take their medicine on time.
- The app also has a feature where in the user can enter the quantity of the medicine he has with him, then add the prescription and if the user choose to repeat these medicines every month, the app will check on the quantity of the medicine and the user can set a threshold quantity where in if the medicine quantity is below that threshold the app will send a notification to the nearest medicine shop which has pillo's shop app installed and alert the shop owner to pack the medicine and after successful completion of packing the medicine the user will receive a notification showing the amount and quantity of medicine ordered. It will also alert the user if any of the medicine from the prescription is not available.
- The app has google map integrations

FUNDBUDDIE (XMINDS INFOTECH July 2020 - June 2022)

- The project is a Fintech app which is used for giving financial support for people who are purchasing stocks.
- For people who are buying stocks can avail for a loan from the app.
- Using third party apps like Plaid and Atomic the app checks the user's credit history and checks on the payroll and accordingly provides a loan for the users.
- The EMI charges and collection is also done through the app using another third-party library integrated to the backend.
- The app also has a calculator for the loan details
- The app is set for US region

POCKETKART(BRM) (VELOSIT August 2019 - June 2020)

- The project is an e-commerce app where the user can buy groceries.
- The user can buy groceries and other items from the app
- The app has a cart feature where we can add items before the purchase.
- The app has google map integrated into so that the user can see from which store they are buying groceries

VELLNEZZ MED (VELOSIT August 2019 - June 2020)

- The project is a health app which is used to track the users health.
- The app has two modules, one for the user and the other for the labs that comes under the VELLNEZZ.
- If the user is a member at VELLNEZZ, he or she can go to labs that are under VELLNEZZ and they can give their membership ID to the lab and the reports will be uploaded to the users account. This will also be uploaded to the doctor who is also under VELLNEZZ and who treats the user.
- The app has notification framework implemented

GoRN (3E IT SOLUTIONS June 2017 - January 2019)

- GoRN is an app for hiring nurses to hospitals as required, tracking their work and billing. It also includes modules for nurses to mark their availability, checkin, checkout and for hospitals to assign tasks to nurses, track work, calculating pay etc.
