PROJECTS HANDLED:

- **AYURVEDA THALIYOLA**

Platform Utilized: Developed using HTML, CSS, Bootstrap and JavaScript as front end designing tool, JSP as server side Tool and MySQL as the backend.

Brief Description:

First Phase: When we going for any wild life tour and found some unique plants and we don't know the details of this, then users can upload the pic of that plant to our application and ask what they want to know. The members of our portal will analyse and give the request information about those plants like what is that plant and why they famous for like this information can be shared.

Second Phase: Collection of all the thaliyolas from different parts and add that information to this portal with the help of Ayurveda doctors feedback.so when a user need to know any specific treatment method for any of the disease they can easily found out the combination and thing that used to making a medicine after that they can post their views and command regarding to this medicine
