PROJECT

HOME FOOD

Flutter Project

HOME FOOD is a flutter project. It has three modules named Login, User, Home. The User and Home can login this app and they will reach different home pages. It is a business idea for un-employed peoples. They can make a home made food and deliver to the customers who need good healthy food like at home. This will be helpful for those who work far away from the home. It provide packages like one week, three month and one year. Customer can pay full payment or installment

E- SHOP

Python Project

E-Shop is a django based web project. It has three modules named Admin, Company, Customer. People can log in and search the items from the website and the company will place the order to customer. Admin can manage the companies and companies must send a request to the admin to registering on this website. After registering companies can sell their product through this website
