## BE PROJECT... Gearless Power Transmission Mechanism

My project "GEARLESS POWER TRANSMISSION" being compact and portable equipment, which is skillful and is having practice in transmitting power at right angle without any gears being manufactured. The El-bow Mechanism transmits the input power towards the output side in such a way that the angular forces produced in the slacks are transmitted with the help of rods which takes up the input power and the right angle drive is transferred towards the output slack and rod assembly. Hence very little friction plays while the power is being transmitted. Hunting and back lash errors are absent. Therefore, it is appreciated that efficiency as high as 90-92% are possible in gearless transmission mechanism.
