PROJECT WORK (Academic)

Automatic star delta starter with single phasing preventer and direction control for 3 phase induction motor

Abstract:

The project is designed to provide low voltage start to induction motors. This is achieved by using star to delta conversion. Star/Delta starters are probably the most common reduced voltage starters in the 50Hz industrial motor world. Star delta is used in an attempt to reduce the start current applied to the motor. Thereafter, full load current is applied to the motor. The Star/Delta starter is generally manufactured from three contactors; and electromechanical timer and a thermal overload for operating a 3phase motor at 440volt at ac mains supply 50 Hz. The interlocking arrangement of all the contactor coils is traditionally wired in 440volt AC. This project uses a system to start a 3phase motor at 440volt AC mains supply 50 Hz with a set of 12volt DC relays in star mode first and then to delta mode by an electronically adjustable timer. A set of relays are used to shift the motor connections from star to delta with a time delay.

SKILLS

- Switches & Circuit Breakers.
- Testing and Commissioning of machine.
- Solar Energy
- Very good in MS Office-MS Word, MS Excel, power point

PERSONAL STRENGTHS

- Self motivated and ambitious with a strong desire to succeed.
- Good interpersonal and communication skills.
- Smart working.
- Loyal and honest.
- Good leadership qualities and time management.
