- Training Manual & PPTs Preparation.

WIPRO TECHNOLOGIES (Jun 20216– Sep 2019)
Software Developer

PROJECT EXPERINCE
GP RMS Grameenphone Limited
Role: Software Developer

Scope: Retailer Management System is a firm step taken by Grameenphone (GP) to manage non-automated operations between retailers and customers. The intention is to simplify business processes and make it easy for customer to demand the products/inventories from retailer, and retailers to collaborate and provide stock amongst themselves.

Responsibilities:

- Worked as a primary developer in RMS Project for Grameenphone, Bangladesh. I have played a major role as a developer for core RMS modules which includes debugging, error- fixing, and development knowledge.
- I have understood and implemented the basic UI/UX model of the 'Stock Transfer Management' module where two or more users can Create, Approve, Search, Cancel, Ship, and Acknowledge the Stock Transferred from different retailers.
- Played a key role while developing a major 'Day End Closing' module under 'Inventory Management', where all users/retailers can maintain their complete day end sale, return, vault and bank transactions, along with next day opening, and today's closing balance.
- Lead the development work for 'Local Store Marketing (LSM)' under 'Campaign Management' module where we are triggering campaign offers to eligible walk-in customers at the stores and fulfill the offer to customer. This module supports cross sell and upsell by Store agents.
- Worked on the **documentation part** for GP including the prototypes and Low-level documents with proper Sequence and E-R diagrams.
- I was one of the key-resource, for the RMS project go-live, with the Implementation of all modules and their respective functionalities along with enhancements that emerge and propagate from time to time.
